Tuberous Begonias

Tuberous Begonias from Belgium

These gorgeous summer-flowering bulbs produce brilliant flowers which are carried above the abundant foliage. They do superbly well in moist soil, in shady spots. They may be planted outdoors from mid-June on, or earlier providing the soil is warm, about 2 inches deep, or the bulbs may be started indoors in pots, in March or April, and transplanted outdoors when warm weather arrives. Lovely shades and brilliant colors.

POPULAR NEW ENGLISH CHRYSANTHEMUMS

For Huge Blooms of Chrysanthemums We Advise the New English Chrysanthemums

By disbudding the plants to produce 8 to 12 buds you will have huge blooms. If plants are left to grow natural without disbudding, you will find the flowers even larger than the older varieties and produced in abundance. They are equal in hardiness, and are all early blooming, with fine brilliant colors unsurpassed in the garden, and excellent for cutting.
